

14-7-14 ALL PURPOSE

With **50% SLOW RELEASED METHYLENE NITROGEN
PLUS MICRONUTRIENTS**

- **Low Salt Index, No Chlorides**
- **Crystal-Clear Solution**
- **Same Ratio As 20-10-20**

GUARANTEED ANALYSIS:

Total Nitrogen (N)14%
7% Urea Nitrogen

Derived From: Urea, Methylene Urea, Potassium Carbonate, Phosphoric Acid, Iron EDTA, Magnesium EDTA, Manganese EDTA, Zinc EDTA, Sodium Molybdenum, Boric Acid.

Chelating Agent: EDTA.

*7% slowly available Nitrogen from Methylene Urea

Weight per gallon: 11.3 lbs.

pH 10-11

PRODUCT DESCRIPTION:

14-7-14 is a concentrated crystal-clear liquid solution in the 2-1-2 ratio that the horticultural industry favors, plus important micronutrients. The solution contains 7% Slow Released nitrogen from our exclusive methylene urea. Methylene nitrogen is the smart approach to nitrogen application. It has been University tested and found to be a very consistent and reliable nitrogen source that remains present and available to your plants for a longer period of time. It does not leach or volatilize and is not easily broken down. Its nitrogen will only be released by a combination of factors (heat, humidity, and microbial activity). This product's control release nitrogen produces a more consistent nitrogen feeding curve. Timing between fertilization can be extended. The slow release nitrogen is a tackifier and is less likely to leach or volatilize. The potassium is completely soluble and therefore immediately available for plant uptake. It is ideal to use when plants are maturing and blooming.

APPLICATION RECOMMENDATIONS:

14-7-14 needs no mixing and will not settle out of solution. Like

- **Use As A Foliar Feed or Drench**
- **Provides Continuous Steady Feeding**
- **Contains All Essential Micronutrients**

all Growth Products formulations, it is ideal for any type of fertigation system, drip irrigation or spray equipment. Use 14-7-14 on all types of bedding plants, perennials, cut flowers, plugs, ornamentals, nursery crops, trees, foliage and container plants.

Direct Siphon: 14-7-14 can be siphoned directly from the original container. This can be done with a variable proportioner that can be set to high ratios. This eliminates the need to mix stock concentrates or stir mixing barrels. For 100 PPM nitrogen, set injector to 1:1900; for 200 PPM, set injector to 1:950.

Parts Per Million: Use the Parts Per Million chart to choose desired nitrogen ratio.

Foliar Feeding: When using overhead irrigation, 14-7-14 gives you dual efficiency since the nutrients will be absorbed by both the leaves and roots. For tender plants and greenhouse foliar spray applications use one-half the rate (PPM) you would normally use for drip irrigation feeding.

Hand Watering: Mix ½ to ¾ teaspoon of 14-7-14 per gallon of water. Saturate soil with mix.

Capillary Mat Systems: Because 14-7-14 has an extremely low salt content it can be used in capillary mat systems and will eliminate the build up of salts in the mat system.

STORAGE & HANDLING:

Storage: All Growth Products horticultural fertilizers can be stored in normal warehouse areas. 14-7-14 has an alkaline pH and is not corrosive. Always store in original container and keep sealed.

Mixing: 14-7-14 is compatible with other technical chemicals including fungicides and insecticides and can be mixed and sprayed in one application. Do not mix products with high calcium content together with 14-7-14.

Nursery Applications		
Application	Rate	Notes
Containerized and Field Grown Crops, (including but not limited to): Deciduous and Evergreen Trees, Foliage, Ornamental Grasses, Perennials, Tropicals, Woody Ornamentals	Foliar Spray: 1 gallon per 100 gal of water (1 L in 100 L water) Rate Per Gallon: 2½ - 5 oz per gal water	Thoroughly spray to point of run-off. Apply every 2-4 weeks.
	Injector Ratio: 7 - 13 fl oz per gallon of stock tank water. Set injector ratio at 1:100 (55-102 ml per liter)	Apply monthly or as needed to supplement nutritional requirements.

Crop Programs	
Plant Type:	Application Rate:
Geranium	Set injector at 150-200 PPM of Nitrogen at a constant feed. (75 - 96 ml per L water at 1:100 ratio)
New Guinea Impatiens	Set injector at 80-100 PPM of Nitrogen for the first 3 weeks. Thereafter, set injector to 150 PPM of Nitrogen. (35 - 52 ml per L water at 1:100 ratio for first 3 weeks. Thereafter 73 ml per L water)
Poinsettia	Set injector at 125 PPM of Nitrogen at a constant feed. (62 ml per L water at 1:100 ratio)
Chrysanthemums / Fluerette	Soil Application Rate: Set injector at 225 ppm Nitrogen every watering. Increase by 50-100 ppm of Nitrogen during winter months due to less watering. (106 ml per L water at 1:100 ratio)
	Soilless Application Rate: Set injector to 200 ppm of Nitrogen every watering. Increase by 50-100 ppm of Nitrogen during winter months due to less watering. (96 ml per L water at 1:100 ratio)
Palms	Mix 2 gallons in 100 gal of water. Apply as a foliar spray monthly. (2 L per 100 L water)
Plugs	Set injector to 100 PPM of Nitrogen. (52 ml per L water at 1:100 ratio)
