Essential® Plus 100% Natural Organic Liquid Soil Amendment	2 ounces per gallon of water	1 gallon covers 100 square feet
Companion® Biological Fungicide	1/2 ounce per gallon of water	1 gallon covers 100 square feet

Annual color transplants need to establish roots quickly in order to maintain flower integrity and plant strength throughout the growing period. Annuals are very often planted in the same flowerbeds year after year. The use of Essential® Plus (liquid organic soil amendment and biostimulant) and Companion® will help to create healthier soil and healthier plants, prevents diseases such as phytophthora, pythium, fusarium, plus more.

#### The Addition of Companion® and Essential® Plus Will:

- Increase root mass, since Bacillus microbes produce plant growth regulators (PGRs), which help in cell division of delicate root hairs.
- Clean root area, Bacillus feeds on dying or dead roots, eating away areas where disease live.
- Adds organic carbon and improves soil structure.
- Provides a valuable food source for soil microbes.
- Add simple and complex sugars, which make plants stronger and more resistant to stress.
- Increase blooms and plant life.

#### The Addition of Growth Products' Fertilizers:

- Will provide continuous feeding with slow release nitrogen.
- Will not burn roots, since it has a low salt index.
- Is easy because of their liquid formula.
