

## Speedy Recovery of Divot and Ball Mark Repair

### *Can Economics and Speedy recovery of Divot and Ball Mark Repair go hand-in-hand?*

Undoubtedly, the biggest part of a superintendent's job involves the appearance of your course; keeping it picture-perfect. Repairs to Tee, Green, and Fairway DIVOT and BALL MARKS take time and labor. Then comes the waiting game before T-markers can be moved for more golfer use. But there really isn't a product on the market that focused on this small but very important area of golf course maintenance.

**Help is here with Repair™ Plus!** We have taken a new approach with time-tested ingredients, which results in SPEEDY RECOVERY of divots and ball marks.

**It all breaks down into four important factors:**

1. **Economics - is a product cost effective?**
2. **Ease - Handling and application.**
3. **Performance – do I see the results and**
4. **Finally- fast turn-around.**

Growth Products has serviced the turf market for 22 years. We are known for quality, performance and fair price position of our products. Although known for our liquid products, many of our raw materials begin as powders and end as liquids. In 2001 we also introduced our first granular products, Companion® Dry Biological Fungicide to the Horticultural market and The Landscaper's Companion. Formulated with the same high quality ingredients, we intended to meet the needs of our customers who prefer blending soil

mixes with a bio controls prior to planting.

**We took this same concept a step further and have applied it to meet the needs of the golf course superintendent. Why not have the same benefits in a pre-mix concentrate product for DIVOT repair: with both the disease control and all the benefits of a biostimulant in ONE PRODUCT?**

**Call it an 'insurance policy' for you and TLC for your turfgrass seed. Repair Plus will enhance your speed-of-recovery with improved germination and rooting.**

What can the Repair™ Plus do for you?

- ✓ Faster, more uniform & abundant seed germination
- ✓ Improve & increase rooting
- ✓ Root protection
- ✓ Establish faster turf playability
- ✓ Protect turf from stress
- ✓ Improve CEC of top dressing or sand mixes
- ✓ Encourage desired grasses to fill in quickly
- ✓ Improves moisture Contains a natural wetting agent ( Saponins)
- ✓ Improves nutrient uptake

Because Repair Plus includes the same active ingredient as our popular EPA-

registered Companion® Biological Fungicide, you can be assured of the same attributes against a broad variety of root rot diseases. This active ingredient, Bacillus subtilis GB03, is a naturally occurring soil bacterium, which produces a broad-spectrum antibiotic. It works much the same as penicillin works in our bodies; it kills off the infection by disrupting the pathogen's ability to produce a perfect cell wall. The results? Death and destruction of the pathogen!

**Here's where it gets even better!**

We then take this proven disease prevention and combine it with the known biostimulant benefits from one of our most popular products. Well-tested materials such as Humic Acid, L-Amino Acids, Kelp, and Natural Rooting hormones combine for a powerful, growth-enhancing punch. All of these raw materials have been used in our popular Essential® Plus Liquid Biostimulant product for many years.

**Repair Plus, combines the BEST of the BEST from Growth Products, Ltd. in a dry concentrate powder formulation for top soil incorporation.**

The rate is just 1 pound per cubic yard of top dressing Compare ingredients and CFU's! This product is head and shoulders above the rest. Packaged in a protective EZ-Store container that IS moisture proof and retains product freshness.
