Turf Edition

Pro-Formance Ultra™ is the Green Choice for Top Performance

Golf course superintendents asked for a superior 18-3-6 fertilizer loaded with soil-friendly organics and just the right amount of chelated minerals, and Growth Products delivered. Last year the company introduced **Pro-Formance Ultra™**, a premium foliar fertilizer designed for high performance greens. Like all of the company's products, **Pro-Formance Ultra™** is an environmentally friendly product. It feeds not just your turf, but your soil as well. A complete package in a single bottle, **Pro-Formance Ultra™** not only provides N-P-K in an 18-3-6 analysis, but five essential micronutrients: calcium, chelated iron, manganese, magnesium and zinc. What sets **Pro-Formance Ultra™** apart from the crowd, however, are its multiple organic ingredients, including humic acid, L-amino acids, kelp extract, yucca extract, and hydrolyzed soy protein – all powerhouses when it comes to plant development and soil improvement.

Pro-Formance Ultra's™ humic acid is derived from leonardite, a soft coal. Humic acid has well-recognized biostimulant properties, and increases nutrient efficiency and uptake, helps restore humus, improves soil structure, *increases soil moisture retention, and enhances soil's natural biological activity* L-amino acids are the building blocks of all living organisms. Plants

normally synthesize their own L-amino acids, but during times of stress a plant's ability to photosynthesize and produce L-amino acids is reduced, and plant and root development suffer as a consequence. Application of liquid L-amino acids enhances photosynthesis, stimulates a plant's metabolic activities, increases root mass, helps plants combat stress, encourages healthy plant growth without surges, and increases a soil's cation exchange.

The kelp, yucca and hydrolyzed soy protein in **Pro-Formance Ultra™** work together with the humic- and L-amino acids to increase foliar absorption of nutrients and to feed the soil. As additional benefits, the natural plant hormones auxin and cytokinin, which are found in kelp, stimulate healthy turf growth, and the saponins in yucca serve as a natural wetting agent. Chemistry aside, the benefits of **Pro-Formance Ultra™** are clear: advanced foliar uptake, superior absorption, improved soil, and no harmful surge growth on your greens. Designed for weekly use (6 oz. per 1,000 feet for cold season turf; 8 oz. per week for warm season turf), **Pro-Formance Ultra™** provides ease-of-use and long-lasting adherence to leaf tissue regardless of weather conditions. For superintendents and greens experts who want the benefits of a technologically advanced

product from an industry leader in liquid fertilizer, and who also want the benefits of high levels of organics, Growth Product's **Pro-Formance Ultra** (18-3-6) is the sustainable, environmentally friendly choice.

"I have been using the Pro-Formance Ultra on my greens with great results. The Pro-Formance is easy to use and it helps to keep my greens strong, healthy and looking great all season long."

*Chad Anderson
The Canyon Club, Armonk, NY*

About Growth Products, Ltd.:

Growth Products, Ltd., founded in 1984, has long been an industry leader in providing technologically advanced and environmentally friendly liquid fertilizers, microbial inoculants, natural organics, and chelated micronutrients. Its innovative products have been extensively tested and are used in 27 countries world-wide.
